CASE STUDY

BRANCH RENEWAL · BAMBAM · BARCELONA

A refreshed restaurant Built around what already works

Interior renewal, adapted furniture and an updated ordering area at BamBam Villarroel.

Renewed wall finishes and adapted seating in the dining area.

The challenge

BamBam wanted to renew its existing branch and bring the customer space into a more modern style. The project needed to connect decorative improvements with practical furniture changes and preparation for restaurant equipment, while preserving useful parts of the existing fit-out.

What we did

We brought surface renewal, carpentry and equipment fit-out into a coordinated refurbishment. The dining area received textured wall finishes, reworked seating and individual tables, with an illuminated brand sign adding a focal point. The ordering area was rearranged around self-service terminals and the existing cash-handling unit.

The result

The branch gained a refreshed interior and a revised arrangement of seating and ordering equipment. Adapting useful furniture and retaining existing finishes where suitable helped direct spending towards the changes that mattered, reducing the need for wholesale replacement.

CASE STUDY

INTERIOR RENEWAL · BEFORE AND AFTER

Changing the space through targeted work

Wall preparation, decorative finishes and furniture adaptation brought the dining area together.

Before: booth seating and the original decorative walls.

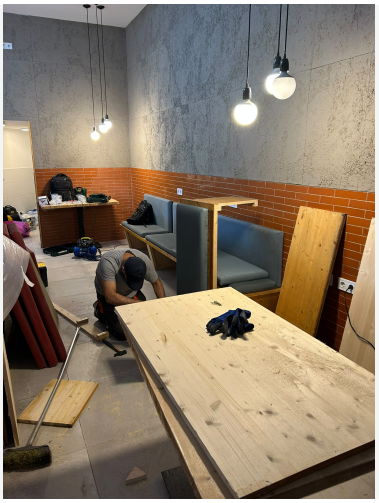

After: refreshed walls and a continuous seating arrangement.

Prepare carefully, preserve useful fittings

The work included protecting the service counter and equipment during refurbishment, preparing wall surfaces and adapting timber furniture. Existing tiled lower walls and pendant lighting remained part of the renewed setting, allowing the refurbishment to build on the branch's established fit-out.

Protected counter and surface preparation during the works.

Carpentry and seating adaptation in progress.

Customer value

Selective renewal retained useful assets and focused the work on visible improvements. Coordinating preparation, finishes and furniture reduced the burden of arranging separate tasks for the customer.

CASE STUDY

EQUIPMENT FIT-OUT · PROJECT COORDINATION

A renewed setting for everyday service

Furniture, branding and ordering equipment integrated into the existing restaurant.

Before: the original counter and ordering arrangement.

Updated self-service terminals and cash-handling position.

Connect the refurbishment with equipment needs

The project scope brought together dismantling, surface repairs, power and network preparation, camera cabling, plumbing provision for a commercial oven, decorative finishes and equipment installation. Coordinating these tasks gave the customer a practical framework for the branch renewal.

Illuminated brand sign against the renewed wall finish.

Customer benefits

The renewal combined a stronger visual identity with adaptations to the existing furniture and ordering area. Reusing suitable fittings helped control replacement costs, while coordinated delivery made the refurbishment easier to manage. The technical scope included system checks and handover; the supplied proposal does not establish completion of every technical item.
